

ABSTRACT

A connector and a contact wafer. The connector (1) comprises at least two wafers (7) and the contact arms (6) of at least two contacts (4) arranged in different wafers (7) is arranged in the same connector contact space (3). The
5 connector wafer (7) is designed so as to allow simultaneous arrangement of the contact arm (6) of a contact (4) arranged in at least one other wafer (7) in the same connector (1) contact space (3).
